

MENTION OTHER POSSIBLE USE CASES WHERE THIS FEATURE WOULD BE HELPFUL.

The feature of specifying preferred aircraft types can be beneficial in various scenarios for different user profiles. Here are some potential use cases:

- **Aircraft Enthusiasts:**

Users who have a particular interest in specific aircraft types, either for personal preference or because of their unique features, may find this feature valuable. They could choose flights based on their favorite planes.

- **Business Travelers:**

Business travelers with specific preferences or requirements related to the type of aircraft they find most comfortable or efficient for work may use this feature to streamline their travel planning.

- **Comfort Preferences:**

Some passengers may have comfort preferences associated with certain aircraft models. For instance, they might prefer larger planes for more space, quieter engines, or specific seating configurations.

- **Frequent Flyers:**

Travelers who frequently fly with a particular airline or prefer a certain aircraft for loyalty or frequent flyer benefits may find it convenient to filter and choose flights that match their preferences.

- **Family Travel:**

Families with specific needs, such as the desire for larger planes with more seating capacity, could use this feature to ensure a comfortable and convenient travel experience for everyone.

- Reducing Carbon Footprint:

Environmentally conscious travelers might prefer flights on more fuel-efficient or environmentally friendly aircraft. This feature could help them choose flights that align with their sustainability values.

- Avoiding Certain Aircraft:

On the flip side, some users might have negative experiences or discomfort associated with specific aircraft models. They could use this feature to avoid booking flights on those planes.

- Special Occasions:

Travelers planning trips for special occasions, such as honeymoons or anniversaries, might have specific preferences for the type of aircraft to enhance the overall experience.

- Accessibility Needs:

Passengers with mobility or accessibility requirements may have preferences for aircraft that better accommodate their needs, and this feature could assist them in making informed choices.

- Travel Agent Assistance:

Travel agents assisting clients with unique preferences can use this feature to tailor their recommendations and find the most suitable flights based on specific aircraft criteria.
